SwimSquad
Behind every swim, a whole squad

Poolside testing checklist

Use fictional swimmers and simulated swims only, away from active supervision duties. This is a functionality test, not approval for real use.

Date: _____ **Coach initials:** _____ **Device / browser:** _____

Club / test session: _____ **Result:** Pass / Needs changes / Not completed

Tick only passed checks. Record failures or untested items below.

Before timing

- ☐ **Sign in:** Open SwimSquad, choose your club and Training. Check the fictional-pilot label.
- ☐ **Prepare:** Check stroke, distance, pool length, repetitions and recovery. Add a process-led outcome, such as "relaxed rhythm".
- ☐ **Attend:** Mark two fictional swimmers Present, then Mark Ready. Select the correct session, set and lane in Poolside Timing.
- ☐ **Order:** Reorder the swimmers, arm the repetition and check the timer cards match.

Test the timing controls

- ☐ **Starts:** Choose "Tap each observed departure". Start swimmers several seconds apart; each clock starts only when tapped.
- ☐ **Finishes:** Finish the second swimmer first. Check each time stays against the correct name.
- ☐ **Safeguards:** A second finish cannot overwrite the first. Test Split, if configured, and Undo last tap.
- ☐ **Repeat:** End group / review, then Prepare next repetition. Order and outcome remain; starting is still explicit.
- ☐ **Planned gaps:** In a separate test, check the countdown and "assumed departure" label.

Review and retain evidence

- ☐ **Review:** Check names, repetitions, times and start basis. Validate a result and find it in Swimmer Progress.
- ☐ **Save and export:** Confirm server acknowledgement. Open the session JSON and times CSV; check their contents.
- ☐ **Handout:** Preview or print a debrief. Blank observations and private notes must be absent.

Optional connection test: In a disposable repetition, disconnect but keep the page open. Check pending status, export capture evidence, reconnect and retry. Confirm no duplicate results. Never reload with pending events.

Report any issue

Failed / untested item and steps: _____

Expected versus actual result: _____

Screenshot or export filename: _____

> **Stop if:** identity or timing is wrong, club access is incorrect, or saving is unconfirmed. Retain evidence and report it. Server-local saves are not an independent backup. Pending events are memory-only and can be lost if the page or device closes.
